

Material Management For Construction

MAXIMIZE EFFICIENCY WITH JOB CARTS

Job Carts are containers equipped with heavy-duty wheels that can be moved from floor to floor or room to room on a job site. The carts are stocked with the material needed for a specific area and phase of a project and then delivered to the jobsite floor where they will be used.

We work with you upfront to ensure the carts are stocked with the products appropriate for each phase of your project and that orders are released consistent with your project's schedule. WESCO strategically loads and arranges material on the cart to maximize efficiency.

Each cart has a demarcation line associated with the contents. When the demarcation line is reached the cart is sent back to WESCO with the unused material (which is credited to the contractor), along with any packaging or waste material.

The next material cart arrives on site with replenishments. Because the materials are close at hand, the electrician is able to work more efficiently.

Job Cart Benefits:

- Materials arrive when they are needed, and exactly where they are needed
- Materials stay well organized inside the cart
- Electrician efficiency increases as they spend less time searching for materials
- Increased productivity through less material handling, loss, and damage
- Reduced cost of labor effort spent on non-installation activities
