

Networked Lighting Controls Create Better Work Environments

WESCO Energy Solutions (WES) will show you how including a Networked Lighting Control System (NLCS) to your lighting upgrade can increase your energy savings by an additional 30-70% and provide better functionality & flexibility to future-proof your space.

Benefits of Installing NLCS:

- Wireless technologies are a simple & non-invasive addition to your lighting upgrade project.
- Easily reprogrammed to accommodate changes in space, schedule, or preference.
- Single point of control & monitoring for managing a single building or multiple sites.
- Enable remote access to your buildings lighting & monitoring systems to safeguard employees and protect your investments and expenses
- Easily customizable light level setting provides ideal work environments & increased employee satisfaction.
- NLCS provides an inexpensive base for expansion into non-lighting smart infrastructure capabilities & services.

Why WESCO Energy Solutions?

- Turnkey solutions provider with access to the latest in energy-efficient technologies to create a future-proof advanced lighting upgrade to meet any specific need and budget.
- Expert design team will leverage multiple solutions like smart metering to create the backbone for a smarter infrastructure.
- Regionally located teams to manage & install your one-of-a-kind energy solution focused on minimizing disruption to day-to-day business operation to limit downtime.
- Access to customer service professionals during & after your project for 24/7 support.

NLCS Terms to Know:

- **Time Scheduling**
Ensure lights are on/off at appropriate times
- **High End Trim/Task Tuning**
Adjust lighting to save money or accommodate the task being performed
- **Daylight Harvesting**
Adjust lighting in response to natural light levels
- **Occupancy/Vacancy Sensing**
Ensure lights are off when space is empty
- **Enterprise Level Control**
Remote access to control & monitor multiple locations from one central point
- **Demand Response**
Adjust light levels to manage peak demand or leverage utility incentives
